# Norway's health and life science industry

Norway, with its extensive coastline of over 83,000 km, including fjords and islands, is one of the global leaders in marine fisheries and aquaculture production. With its vast experience and knowledge of ocean-based activities, Norway prioritises sustainable and environmentally friendly fisheries and aquaculture management.

Norwegian waters are teeming with fisheries and fish farms, and the seafood industry is Norway's second largest exporter. This wealth of marine resources has spurred Norwegian life sciences companies to innovate by extracting useful compounds from marine products. The innovations have led to advancements in health, medicine, and food production, contributing to the development of a blue circular economy.

Norway's health and life science industry is a pioneer in sustainable health solutions, with particular strengths in the areas of biopharma, medtech and digital health. It has made technological breakthroughs in several areas that have advanced the field of medicine.

The Norwegian nutraceuticals are thriving, driven by the presence of numerous top-tier biotech companies. **Meet us and see why Norway is established as a frontrunner in health and life science industry.**

## AKER BIOMARINE

Aker BioMarine is a sustainable biotech company and supplier of Superba Krill Oil. 100% pure krill with unique phospholipid EPA and DHA Omega-3s and the naturally occurring antioxidant astaxanthin, Superba Krill has clinically proven efficiency. Superba Krill has no fishy aftertaste, is easy to digest, and easily absorbed into the body's cells. Aker is the only krill fishery to earn MSC Certification for sustainable harvesting and only Superba Krill products have 100% traceability from sea to shelf.

Arctic Bioscience is a Norwegian company developing and commercializing pharmaceutical and nutraceutical products based on unique bioactive marine compounds, utilizing proprietary technology and methodology. Our vision is to improve quality of life for people with inflammatory disorders.

Romega® extracted from Norwegian Herring Caviar - a sophisticated source of important nutrients - is sourced from Norwegian herring caught in MSC-certified fisheries and produced using a patented process that gently separates the protein and lipids in herring caviar. Romega® herring caviar is a premium phospholipid-bound omega-3 source for consumers who want only the very best for their health including a 3:1 DHA/EPA ratio, LPC DHA content and quantified levels of SPM and PRM.

# ConCordix®

patented technology by Vitux®

ConCordix is a revolutionary technology by Norwegian contract manufacturer Vitux AS. ConCordix Smart Chews mirror the structure of food for optimal nutrient absorption, providing 43% greater uptake than softgels. This patented technology allows for the inclusion of high payloads of oil-soluble ingredients in combination with water-soluble ingredients in the same formulation. Each dose is individually sealed within a blister pack to prevent oxidation and guarantee stability throughout the product's shelf life. With a variety of delicious natural flavors and no sugar, ConCordix Smart Chews offer an effective and enjoyable supplementation experience.

Part of Norwegian fishery giant Pelagia AS, Epax Norway AS is a leading manufacturer of concentrated marine oils. Epax® has been an innovator for over 185 years. Since 1838, when it began producing premium quality cod liver oil, Epax has transformed the marine ingredients sector. It invented the technology to concentrate fish oil as an ethyl ester, and to re-esterify oils back to TG-form. It was also the first company to create condition-specific EPA/DHA ingredients backed by science. Today Epax continues to deliver Omega-3 products of unmatched purity and quality.

The Epax production facility in Ålesund, Norway has, in addition to all standard manufacturing certifications/approvals, been approved by the US FDA for manufacture of Pharmaceutical Intermediates and by the Norwegian Medicines Agency (Legemiddelverket) for the production of Active Pharmaceutical Ingredients (APIs).

Where the fjords meet the mountains at the beautiful west coast of Norway, not far from the old fishing town of Ålesund, lies the small island of Terøy where Pharma Marine has its home.

Pharma Marine was founded on a deep respect and love for the ocean. Invention and innovation is an essential part of history, always inspired by mantra: Take only what you need and utilise everything you harvest from nature. With eco-friendly production of marine ingredients at heart, Pharma Marine learns from the balance in nature to provide a healthier life for people. For Pharma Marine, tradition and innovation go hand in hand.

Pharma Marine is a family business with family values at its core. Pharma Marine believe in close relationships with partners, employees, local community and an enduring respect for nature. By combining the traditions and knowledge from the generations before us, with the technology and the innovations of today, Pharma Marine is proud of making premium quality omega-3 products that gives people a better health – and a better quality of life.

## RIMFROST KRILL COLLECTION

Multifunctional ingredients for:

- Human nutrition
- Aquaculture
- Pet food

## RIMFROST KRILL COLLECTION

RIMFROST AS is a family-owned Norwegian biotech and fishing company that blends long-standing fishing traditions and expertise with a unique patented production technology to deliver high-quality products for human health, aquaculture, and animal nutrition.

Our world-class innovation stems from our belief in krill as an exceptionally rich nutritional source that has minimal impact on the planet. Sustainability and traceability are at the core of our operations, driving our support for stringent regulations to preserve the Antarctic ecosystem.

RIMFROST AS has grown into a leading player in the nutritional sector, with a strong focus on developing innovative krill-derived omega-3 products. The incredible strength of krill comes from its high concentrations of efficient omega-3 fatty acids bound in phospholipids, high quality marine proteins and the powerful antioxidant astaxanthin.
